### Summary

Manmade structure(s) on a land water interface. Rounded structures present. Large, sprawling angular structures with maze-like interior; pipes, controls, and screens, people in coveralls; people present were very occupied, at a hectic pace, checking things, discussing; maintaining. There were 2 parts to facility—one part dealing with heavy, industrial-like machinery, some power generation. The other part quiet, organized, scholarly, used by planning, thinking, & engineering. People were educated, excited, worried, anxious, anticipating, surprised, satisfied, realistic, dedicated, enthusiastic, and related to official/governmental/paramilitary type activity. Site seemed to have something to do with space.
